OLEKSANDR KOSHEVIEROV

Senior Frontend Developer & Architect | Angular Architecture, Microfrontends & Modernization

Hanau, Germany · +49 151 72585876 · iworb.ne@gmail.com · linkedin.com/in/oleksandr-k-74266212b

Authorized to work in Germany

PROFESSIONAL SUMMARY

Senior frontend developer and architect with 11+ years in web development and around eight years working with Angular and AngularJS. Designs and modernizes complex B2B platforms, combining hands-on engineering with frontend architecture, microfrontends, shared libraries, major-version migrations, and data-intensive user interfaces. Coordinates small teams of up to three developers and delivers for international clients across retail, mining, industrial IoT, and e-learning.

CORE EXPERTISE

Frontend: Angular, AngularJS, TypeScript, JavaScript, RxJS, NgRx, Signals, Angular Material, HTML5, CSS3/Sass
Architecture: Frontend architecture, microfrontends and microapps, shell applications, shared libraries, domain decomposition, Angular migrations, Angular Elements
Complex Interfaces: Hierarchical grids, client-side calculation engines, 2D/3D mapping and visualization, accessibility, responsive design, web performance
Quality & Delivery: Karma, Vitest, Cypress, Storybook, Git, Docker, TeamCity, Azure CI/CD, Webpack, ESBuild, Vite
Engineering Practice: AI-assisted development for tests, component modernization, technical analysis, Storybook stories, and documentation, with independent review and validation of all outputs
Additional Technologies: Flutter, Dart, BLoC, React, Vue 2, Node.js, PHP, WordPress; basic practical experience with Minikube for local clusters

PROFESSIONAL EXPERIENCE

Freelance Senior Frontend Developer & Architect · Feb 2015 – Present

International B2B clients in the United States, Australia, and Ukraine; remote from Germany since April 2023.

Merchandise Planning Application | Boot Barn · Dec 2021 – Present

Lead Frontend Developer & Architect — *Data- and compute-intensive internal platform for merchandise purchasing budgets and plan-versus-actual analysis.*

- Architected the Angular frontend and integrated it into an existing enterprise portal, taking ownership from technical design through implementation and ongoing evolution.
- Designed a configurable multi-level planning grid with multiple views, drill-down levels, and user settings for large volumes of interdependent business data.
- Created a client-side calculation architecture for dependent metrics, including evaluation order and handling of incomplete or invalid input without mandatory server-side recalculation.
- Introduced workload estimation, user warnings, feedback, and partial-reset mechanisms to reduce failures from configurations that exceeded client-device resources.
- Coordinate feature delivery for up to two developers, communicate directly with the client, and contribute to testing and Azure CI/CD setup.

Technology: Angular, TypeScript, RxJS, NgRx, TreeGrid by COQsoft, Karma, REST APIs, Azure CI/CD

HELIX Mining Monitoring Suite | MST Global · Dec 2018 – Present

Lead Frontend Developer & Architect — *Monitoring and analytics platform for surface and underground mining operations.*

- Architected an ecosystem of more than 10 independently deployable Angular microapps, using route orchestration, containerized delivery, a shared shell, and a common library for sessions, organizations, settings, UI, and shared components.
- Delivered the Angular 7-to-14 modernization and now contribute to the Angular 14-to-22 migration, enabling applications to upgrade incrementally rather than through a platform-wide release.
- Developed authentication, user settings, user management, reporting, and dashboard applications; continue to extend and maintain the map application.
- Optimized map-object clustering from two fixed levels to dynamic grouping based on user selection and zoom, and added support for new object types.
- Coordinate one developer and collaborate with engineers across other platform teams.

Technology: Angular 7–22, TypeScript, RxJS, NgRx, Angular Material, Leaflet, D3.js, Turf.js, Three.js, Proj4, Docker, TeamCity

ADDITIONAL SELECTED PROJECTS

Internal Integration Portal | Boot Barn · Feb 2019 – Sep 2024

Frontend Developer & Architect — *Internal portal covering the status of enterprise integrations.*

- Selected the target frontend architecture and decomposed a legacy monolith into more than 10 domain-focused microapps with a shared library and independent delivery cycles.
- Implemented part of the application suite in a team of approximately three developers and worked directly with the client.

Technology: Angular 11, TypeScript, RxJS, microapps, shared libraries

Positron IoT Monitoring Platform | iQuipsys · Aug 2018 – May 2023

Frontend Developer — *Real-time monitoring of devices, equipment, location, sensor states, and configurable response rules.*

- Independently analyzed the AngularJS monolith, extracted reusable modules into a shared library, split the remaining functionality by business domain, and composed the resulting applications.
- Migrated the decomposed applications from AngularJS to Angular 6 while preserving the real-time mapping and rules workflows.

Technology: AngularJS, Angular 6, TypeScript, microapps, shared libraries, real-time maps

Practice Guru · Apr 2020 – May 2023

Lead Developer & Architect — *Mobile and web platform for authors to publish paid or free courses, manage groups, and communicate with learners.*

- Developed the complete Flutter mobile application from the supplied design and built an Angular web application for course authors.
- Owned technical architecture, tool and package selection, and delivery coordination for a team of approximately three; the product reached production and was released on Google Play and the App Store.

Technology: Flutter, Dart, BLoC, Angular, TypeScript, RxJS

Embeddable Product Configurator · May 2019 – Dec 2020

Angular Developer — *Reusable configurator embedded by independent jewelry retailers on their own websites.*

- Built the frontend from scratch as an Angular Elements web component, including a configurable hierarchical form whose available options were loaded from APIs based on previous customer choices.
- Created one reusable solution that could be styled and embedded across multiple retailer websites; it remained in use on several sites at the time of the latest review.

Technology: Angular, Angular Elements, TypeScript, RxJS, REST APIs

Earlier Web Development · Feb 2015 – Jul 2018

Independent Web Developer — *Websites and internal tools for local clients.*

Delivered news, community, commercial, and internal websites using WordPress, MODx Revolution, SocialEngine, PHP, Vue 2, HTML, CSS, and JavaScript.

EDUCATION

Specialist Qualification in Computer Science | Donetsk National Technical University, Ukraine · 2015

Information Control Systems and Technologies · Graduated with honors · Thesis focused on medical image analysis. ZAB Statement of Comparability (2024): combined qualification comparable to a German higher-education qualification at master's level.

Bachelor of Computer Science | Donetsk National Technical University, Ukraine · 2013

Graduated with honors.
